## Is It Relevant Which Crew Officiates a Game?

(Correlation - not causation)
The table below shows the total of the FFF players' 2010 winning percentage, broken out by which crew officiated each game. "Wins" are the number of times our FFF players picked the correct winner of the game. The average success rate of all FFF'ers, in 2010, over all games is 60\%.

If we look at where NFL officiating crews rank in the number of penalties called (including penalties that were declined) in a few categories where discretion and controversy tend to apply:

- DPI - Defensive Pass Interference
- OPI - Offensive Pass Interference
- RTP - Roughing the Passer
- Index - The sum of these type of calls over the entire season:

We note that the crews with either the highest number or lowest number of combined calls (highlighted in yellow) correlates to games among which our FFF'ers were the least successful in predicting the outcome.

Further, FFF'ers were most successful in predicting outcomes of games officiated by crews whose number of calls were neither extremely high nor extremely low (highlighted in green).

In terms of predictability, the 2010 season was not an outlier for these crews, when compared to their combined calls over the last three seasons:

No causation is implied here, though our FFF'ers may want to consider their picks more closely where either Ed Hochuli or Walt Coleman's crews are officiating.

Likewise, where Cheffers, Riveron, or Parry's crews are officiating, we may not be as concerned that officiating will be a factor in our picks.
